PROJECT CASE STUDY

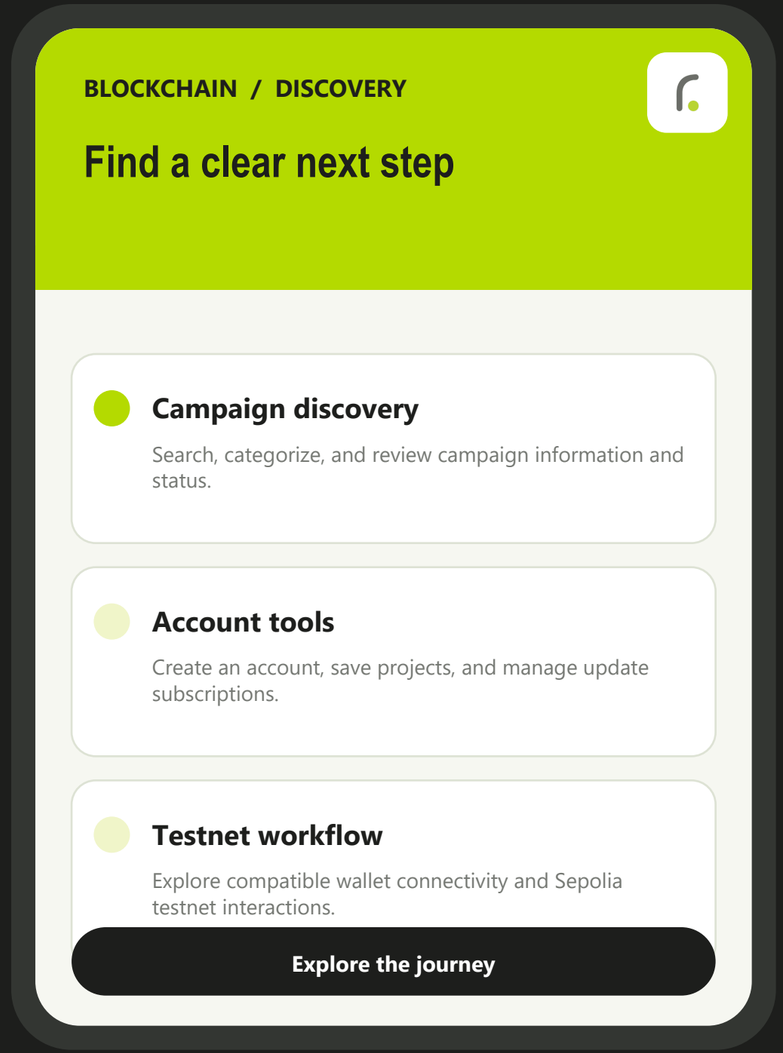
DigiList

Digital asset discovery and launchpad

A digital-asset discovery and launchpad experience with searchable campaigns, project saving, wallet connectivity, and testnet-oriented interactions.

DOCUMENTED STATUS

Testnet-oriented product scope



Illustrative interface based on documented project scope

The project in brief

DigiList organizes digital-asset campaign information so visitors can search, filter, and review emerging blockchain projects. The documented scope includes user accounts, saved projects, update subscriptions, wallet connectivity, campaign administration, and Ethereum Sepolia testnet interactions.

PROJECT CHALLENGE

Campaign information can be difficult to compare when it is scattered across separate project pages. A launchpad-style interface needs to make discovery and participation steps understandable while distinguishing test activity from real offerings.

01 / PLATFORM

Digital asset discovery and launchpad

02 / APPROACH

A searchable campaign catalogue connects project exploration with account-based saving and clearly bounded testnet interactions.

03 / STATUS

Testnet-oriented product scope

The summary describes documented project scope; it does not claim unverified results.

A clearer route through the challenge

Campaign information can be difficult to compare when it is scattered across separate project pages. A launchpad-style interface needs to make discovery and participation steps understandable while distinguishing test activity from real offerings.

DESIGN INTENT

A searchable campaign catalogue connects project exploration with account-based saving and clearly bounded testnet interactions.

Project scope

The documented interactions are testnet-oriented. This case study does not claim a live investment service, production token sale, or financial return.

Documented status

Testnet-oriented product scope

Turn the brief into a coherent experience

A searchable campaign catalogue connects project exploration with account-based saving and clearly bounded testnet interactions.

01	**Campaign discovery**	Search, categorize, and review campaign information and status.
02	**Account tools**	Create an account, save projects, and manage update subscriptions.
03	**Testnet workflow**	Explore compatible wallet connectivity and Sepolia testnet interactions.

Three capabilities shape the product

A visual index of the documented features in this project.

01

Campaign discovery

Search, categorize, and review campaign information and status.

Account tools

Create an account, save projects, and manage update subscriptions.

Testnet workflow

Explore compatible wallet connectivity and Sepolia testnet interactions.

The cards summarize the project brief; they do not represent measured outcomes.

From discovery to a considered next step

The four stages below follow the project’s documented workflow.

Browse campaigns

Explore projects by category and status.

Review details

Search and compare project information.

Save a project

Use account tools to keep track of discoveries.

Explore testnet

Use wallet and interaction patterns on a test network.

Workflow steps are documented journey descriptions, not evidence of completed or live transactions.

The documented product surface

A structured view of the feature set and its stated boundary.

Campaign discovery

Search, categorize, and review campaign information and status.

Account tools

Create an account, save projects, and manage update subscriptions.

Testnet workflow

Explore compatible wallet connectivity and Sepolia testnet interactions.

Scope boundary

The documented interactions are testnet-oriented. This case study does not claim a live investment service, production token sale, or financial return.

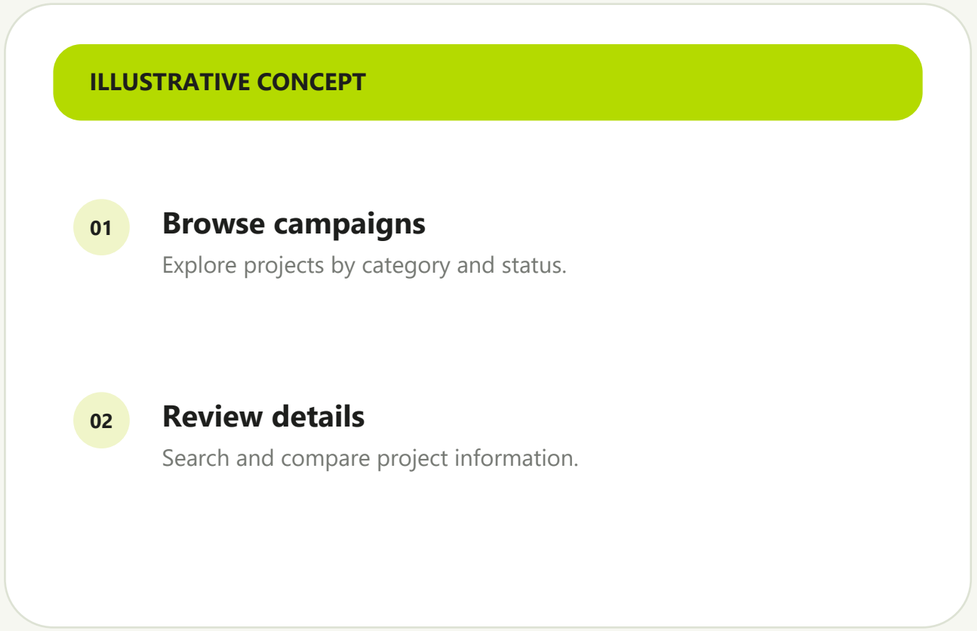
Campaign discovery

Search, categorize, and review campaign information and status.

DOCUMENTED SCOPE

The documented interactions are testnet-oriented. This case study does not claim a live investment service, production token sale, or financial return.

Illustrative page concept; not a screenshot of a live product.



07 / FEATURE SPOTLIGHT 2

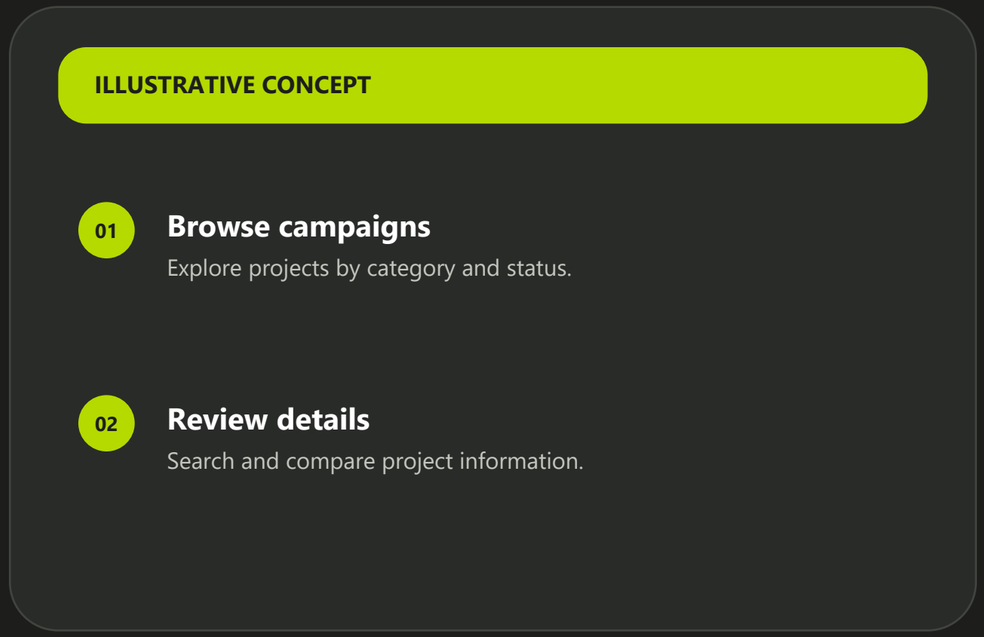
Account tools

Create an account, save projects, and manage update subscriptions.

DOCUMENTED SCOPE

The documented interactions are testnet-oriented. This case study does not claim a live investment service, production token sale, or financial return.

Illustrative page concept; not a screenshot of a live product.



07 / FEATURE SPOTLIGHT 3

Testnet workflow

Explore compatible wallet connectivity and Sepolia testnet interactions.

DOCUMENTED SCOPE

The documented interactions are testnet-oriented. This case study does not claim a live investment service, production token sale, or financial return.

Illustrative page concept; not a screenshot of a live product.

ILLUSTRATIVE CONCEPT

01 **Browse campaigns**
Explore projects by category and status.

02 **Review details**
Search and compare project information.

How the stages connect

A storyboard view of the documented journey, shown without invented users or outcomes.

01

Browse campaigns

Explore projects by category and status.

02

Review details

Search and compare project information.

03

Save a project

Use account tools to keep track of discoveries.

04

Explore testnet

Use wallet and interaction patterns on a test network.

The sequence represents documented product intent; it does not imply a live customer transaction.

One product, connected capabilities

The feature groups below are presented as a conceptual map, not a technical architecture.

Campaign discovery

Search, categorize, and review campaign information and status.

Account tools

Create an account, save projects, and manage update subscriptions.

Testnet workflow

Explore compatible wallet connectivity and Sepolia testnet interactions.

Relationships are illustrative and do not claim integrations or implementation details.

Separate the challenge from the solution

This comparison keeps the project problem and documented product response in view.

01 / CHALLENGE

Campaign information can be difficult to compare when it is scattered across separate project pages. A launchpad-style interface needs to make discovery and participation steps understandable while distinguishing test activity from real offerings.

02 / APPROACH

A searchable campaign catalogue connects project exploration with account-based saving and clearly bounded testnet interactions.

The product, from entry point to next step

A simple blueprint drawn from the documented experience and feature set.

START

EXPLORE

CONTINUE

Browse campaigns

Explore projects by category and status.

Campaign discovery

Search, categorize, and review campaign information and status.

Explore testnet

Use wallet and interaction patterns on a test network.

What the brief says

A concise reference for the product concept, its status and its documented scope.

Industry

Blockchain

Product

Digital asset discovery and launchpad

Status

Testnet-oriented product scope

Scope

The documented interactions are testnet-oriented. This case study does not claim a live investment service, production token sale, or financial return.

Questions to validate before release

These are review recommendations, not completed project work or tested results.

User needs

Confirm the intended audience, core tasks and acceptance criteria.

Content clarity

Review language, labels and decision points for the relevant product context.

Responsive behavior

Test supported screen sizes, navigation and layouts on target devices.

Quality checks

Validate accessibility, error handling, privacy and operational expectations.

Scope matters as much as features

This summary reflects the documented project scope and does not add unsupported outcomes.

The documented interactions are testnet-oriented. This case study does not claim a live investment service, production token sale, or financial return.

Documented status

Testnet-oriented product scope

No unverified outcomes

No performance, customer, financial or operational results are claimed by this case study.

What comes before production

These general review areas are recommendations, not capabilities claimed as delivered.

Validate requirements

Confirm scope, acceptance criteria and user needs.

Review privacy and security

Define appropriate protections and operational controls.

Verify integrations

Confirm required external systems and validate them before launch.

Plan operations

Establish ownership, support, monitoring and maintenance responsibilities.

The concept at a glance

A digital-asset discovery and launchpad experience with searchable campaigns, project saving, wallet connectivity, and testnet-oriented interactions.

Campaign discovery

Search, categorize, and review campaign information and status.

Account tools

Create an account, save projects, and manage update subscriptions.

Testnet workflow

Explore compatible wallet connectivity and Sepolia testnet interactions.

Documented status: Testnet-oriented product scope

EXPLORE THE PROJECT

A considered foundation
